SUMMARY

Final-year Electronics & Communication Engineering student (DSCE Bangalore, 2027) targeting Software Engineer / Full Stack Developer roles, with 3 production-grade MERN applications deployed and hands-on Data Analyst internship experience in a live fintech environment. Builds scalable web applications using React.js, Node.js, Express.js, MongoDB, JavaScript, and TypeScript, with strong command of RESTful API design, JWT authentication, SQL, Git/GitHub version control, and CI/CD-based cloud deployment. Solved 200+ Data Structures & Algorithms problems across LeetCode, Codeforces, and GeeksforGeeks, with a strong problem-solving foundation. Seeking a Full-Stack / MERN Stack Developer role to build production software.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, Python, Java, C++, C#

Frontend: React.js, Redux, Context API, React Hooks, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive Design, Cross-Browser Compatibility

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, OAuth 2.0, bcrypt, MVC Architecture

Database: MongoDB, Mongoose ODM, PostgreSQL, MySQL, SQLite, Firebase

Architecture: MVC, RESTful Architecture, Star-Schema Data Modeling, Scalable Component Design

Developer Tools & Deployment: Git, GitHub, VS Code, Postman, Vercel, Render, Git-based CI/CD

Testing: API Testing (Postman), Manual & Cross-Browser Testing

AI & Data Tools: Google Gemini API, OpenRouter API, Prompt Engineering, Power BI, Pandas, ETL

Other: Next.js (basics), Spring Boot (basics), Data Structures & Algorithms, Object-Oriented Programming, Agile/Scrum

EXPERIENCE

Data Analyst Intern — Bluestock Fintech ([bluestock.in](#))

Mar 2025 — May 2025 | Remote | Python · PostgreSQL · ETL Pipelines · Data Warehousing · Star Schema · Agile

- Engineered automated Python ETL pipelines to extract, clean, and load 12 years of financial data into a PostgreSQL star-schema data warehouse, enabling efficient analytical querying and business reporting.
- Analyzed large-scale financial datasets to identify trends and anomalies, delivering actionable, data-driven insights in a live fintech environment.
- Followed Agile development practices, participating in sprint planning and peer code reviews while maintaining clean, well-documented Python scripts aligned with industry coding standards.

Virtual Experience Program — Tata Group (Data Analytics) & Deloitte (Technology)

2024

- Cleaned and structured raw business data, then presented insights and recommendations to non-technical stakeholders.
- Practiced Agile sprint planning, code reviews, and technical documentation in a simulated enterprise environment.

PROJECTS

Skillpath-AI — AI-Powered Placement Preparation Platform | [GitHub](#) | [Live Demo](#)

React.js · Node.js · Express.js · MongoDB · Gemini API · OpenRouter API · JWT · Vercel · Render

- Built a full-stack MERN platform integrating Google Gemini and OpenRouter APIs to deliver personalized learning roadmaps, resume analysis, and AI-driven mock interviews, with protected routes secured via JWT and bcrypt authentication.
- Implemented Context API for global state management and a responsive, cross-browser UI featuring progress tracking, job insights, and PDF export; deployed via Git-based CI/CD on Vercel and Render.

Smart Task Manager — Full-Stack Task Management Application | [GitHub](#) | [Live Demo](#)

React.js · Node.js · Express.js · MongoDB · JWT · Context API · Render · Vercel

- Developed a MERN-stack task management application with full CRUD operations, JWT authentication, task categorization, priority levels, and deadline tracking with real-time UI updates; deployed on Render via a Git CI/CD workflow.
- Designed a mobile-first, cross-browser compatible interface featuring efficiency metrics, streak monitoring, and smart filtering.

Mutual Fund Data Pipeline & Analytics Engine | [GitHub](#)

Python · SQLite · Pandas · Power BI · ETL · Financial Modeling

- Architected an end-to-end Python ETL pipeline to ingest, clean, and normalize 150,000+ rows of fragmented mutual fund data (NAVs, AUM, transactions) into a relational SQLite database using a star-schema topology.
- Programmed financial business logic (CAGR, Rolling Sharpe Ratio, Historical VaR) to evaluate fund performance and flag portfolio concentration risk; integrated results into a 4-page interactive Power BI reporting dashboard.

EDUCATION

B.Tech, Electronics & Communication Engineering — DSCE Bangalore | Sep 2023 — Mar 2027 | CGPA: 7.01

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Web Development, SQL, Algorithm Analysis & Design

CERTIFICATIONS & ACHIEVEMENTS

- Solved 200+ problems on LeetCode, Codeforces, GeeksforGeeks, and CodeChef; maintained a 50-day LeetCode streak.
- Built an emergency route optimization solution at Aventus 3.0 Hackathon (May 2025) using graph algorithms for faster relief delivery.
- Certified: Oracle (Java), Deloitte (Technology), Tata (Data Analytics), Infosys (Angular); completed React.js, Node.js, and Next.js certifications.
- Head of Content & Social Media, Photography Club, DSCE — managed digital content and event coverage for a 10+ member team.
